

# Do your brakes squeal?

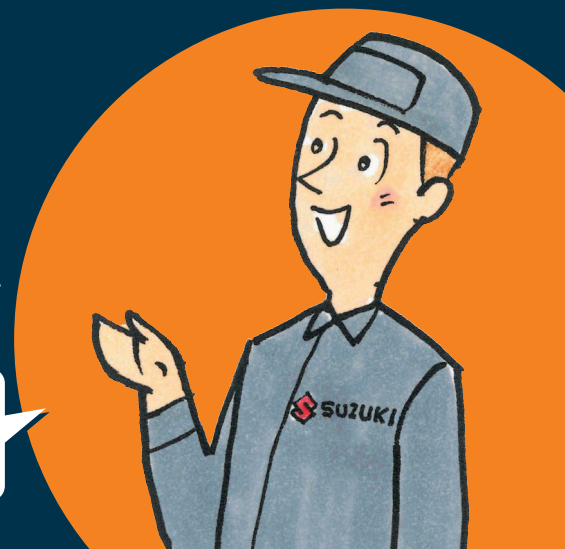

## It might be your brake pads!

### [ Useful tips on brake pads ]

Brake pads are consumable items which need regular checkups and replacement. If worn brake pads are not replaced, they will eventually damage the brake discs. Brake discs are expensive, so it would be best to change the brake pads at an appropriate timing to avoid unnecessary expenses. Above all, the brakes are a fundamental part of your car which is connected directly to your safety. Therefore, if you hear any abnormal noise, or feel something unusual, consult a Suzuki dealer for advice.

# Brake pad replacement recommendations

## If overused without replacement...

- Frequent abnormal squealing noise when stepping on brakes
- Decrease in brake fluid level (Lighting of Brake system warning light)
- Deterioration of brake force
- Increase in Braking distance
- Brake disc damage

## If replaced to new ones

- Full braking performance
- Appropriate braking distance
- No constant irregular noise when stepping on brakes

**Periodical checkup and replacement will maintain comfortable driving!**

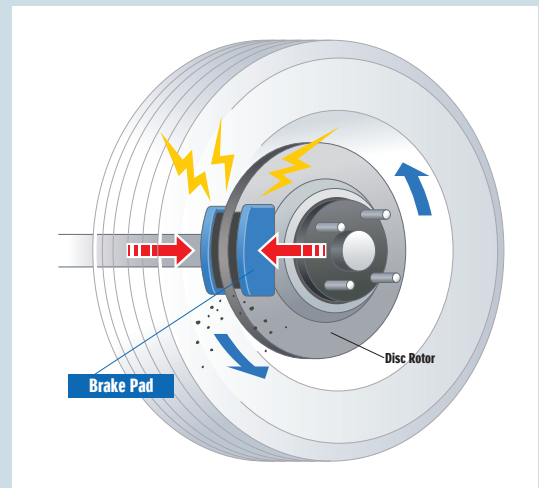

## Inspection guideline (Replace if necessary)

Interval		
15,000 km	1 year	*whichever comes first

## Purpose and Function

When the driver depresses the brake pedal, the brake pads are pressed against the brake disc which produces friction. The friction generated between the pads and disc is converted to heat energy which acts to reduce speed or bring the car to stop.
