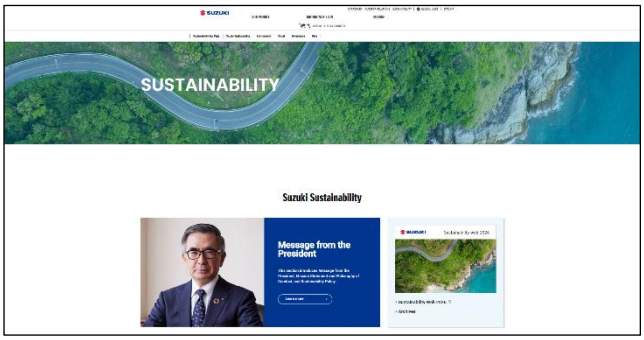
Suzuki Publishes FY2026 Integrated Report and Sustainability Website



Suzuki Motor Corporation has published FY2026 versions of Integrated Report and Sustainability Website on its corporate website.

The Integrated Report introduces the value that the Suzuki Group creates through its business activities, as well as the management strategies and initiatives that support value creation and future growth. To improve readability, the report structure has been reorganized into two sections this year: A Special Feature Section and a Main Report.

In addition to publishing the entire report in PDF format, Suzuki has also made the content of the Special Feature Section available on a dedicated website. Through search engines and other online channels, Suzuki aims to communicate its approach to value creation and related initiatives to enhance stakeholders understanding and engagement.

The Sustainability Website presents the Suzuki Group's sustainability philosophy, initiatives, and performance data. As in the previous year, Suzuki will continue to disclose sustainability-related information primarily through the website, enabling stakeholders to access the latest and most detailed information.

[Integrated Report]

Key Updates

- Reorganized into two sections: Special Feature Section and Main Report

  Special Feature Section:

  Focuses on the theme of "Infrastructure Mobility," introducing Suzuki's vision and role in society from multiple perspectives.

  Main Report:

  Covers initiatives that support sustainable growth, including the value creation process, business strategies, and technology strategies.
- Updated growth strategy information, including progress on Technology Strategy 2026 and DX (Digital Transformation) Strategy.
- Expanded environmental disclosures.
